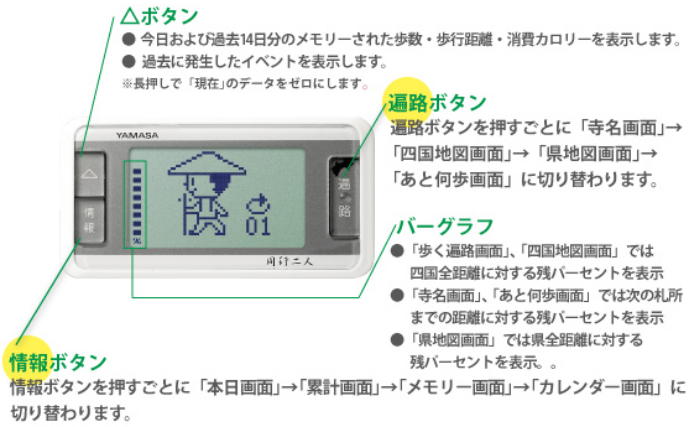
### 名入れサイズ (mm)

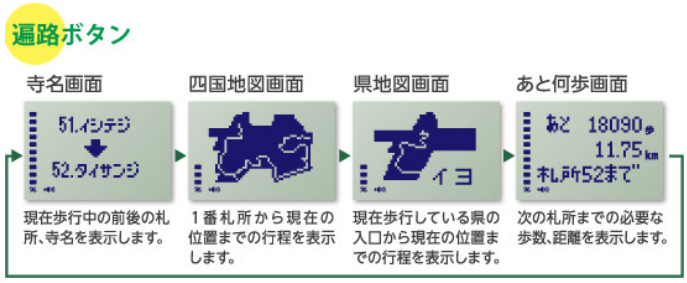
We can engrave names on novelties, promotional items, and commemorative items.

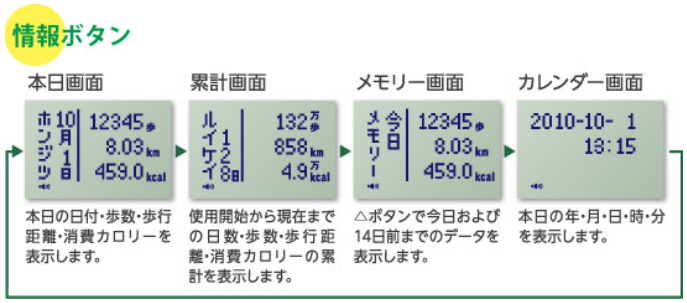
裏面

"Pedometer" is a registered trademark of Yamasa Clock & Instruments Co., Ltd.
It is the product name of our pedometer.

## Virtually experience 88 sacred sites and 1200km of Shikoku!!







## Various events occur

At various points along the pilgrimage, events appropriate to the location (explanations in the local dialect, local specialties, tourist attractions, etc.) and sermons from priests (words of gratitude, life lessons) occur accompanied by sound.
Events that occur are recorded, so you can look back on your pilgrimage over and over again.

**Melodies of "Awa Odori" and "Yosakoi" dances are played along with the events!!**

## Accumulation function to boost motivation

Displays the cumulative total from the start of use to the present. It displays 1 billion steps, 100,000 km of walking distance, 100 million kcal of calories burned, and up to 10,000 days of use, so **you can stay motivated for a long time.**
It has a data retention function, so the data will not be erased even if you change the battery.

*24 hours of data is stored in memory at 2:00 a.m.
If you change the battery, the data from 2:00 a.m. on the day will be erased.

## Accurately measure your steps

The walking detection function suppresses vibration measurement other than walking.

For example, for a while after you start walking,
the number of steps is not counted because the movement is determined to be walking.
If you walk 10 steps or more continuously, the number of steps up to that point will be displayed together.

Also, if you stop walking,
your number of steps will not be counted unless you walk 10 steps or more continuously again.

## Section measurement is also possible

If you want to know the number of steps you take only when commuting, you can reset the current display data and start measuring from 0.
You can also check the cumulative data measured on the day on the memory mode screen.

## Equipped with a 3D acceleration sensor, it can be stored in a pocket or bag.

Because it uses a high-performance three-way acceleration sensor, it will count your steps no matter what angle the pedometer is tilted at.
You can measure by putting it in your pocket or bag, or wearing it around your neck using the neck strap.

*Please use a commercially available neck strap. (We recommend using one with safety features.)

## What is a pilgrimage?

The Shikoku Pilgrimage was established by Kobo Daishi at the age of 42 about 1,200 years ago to ward off disasters. It is said that the pilgrimage to the sacred sites began when his disciples later traveled around the area. It is said that humans have 88 earthly desires, and that by visiting the 88 sacred sites, these desires will disappear and wishes will come true. Visiting the

88 sites in order, starting from the first temple, is called "junuchi" and covers a total distance of about 1,200 km. It generally takes about 40 days (30 km per day) to walk all 88 sites. Visiting all 88 sites is called "kechigan" (completion of a pilgrimage), and then visiting Mount Koya is called "manganjoji".
